

One place for money matters.

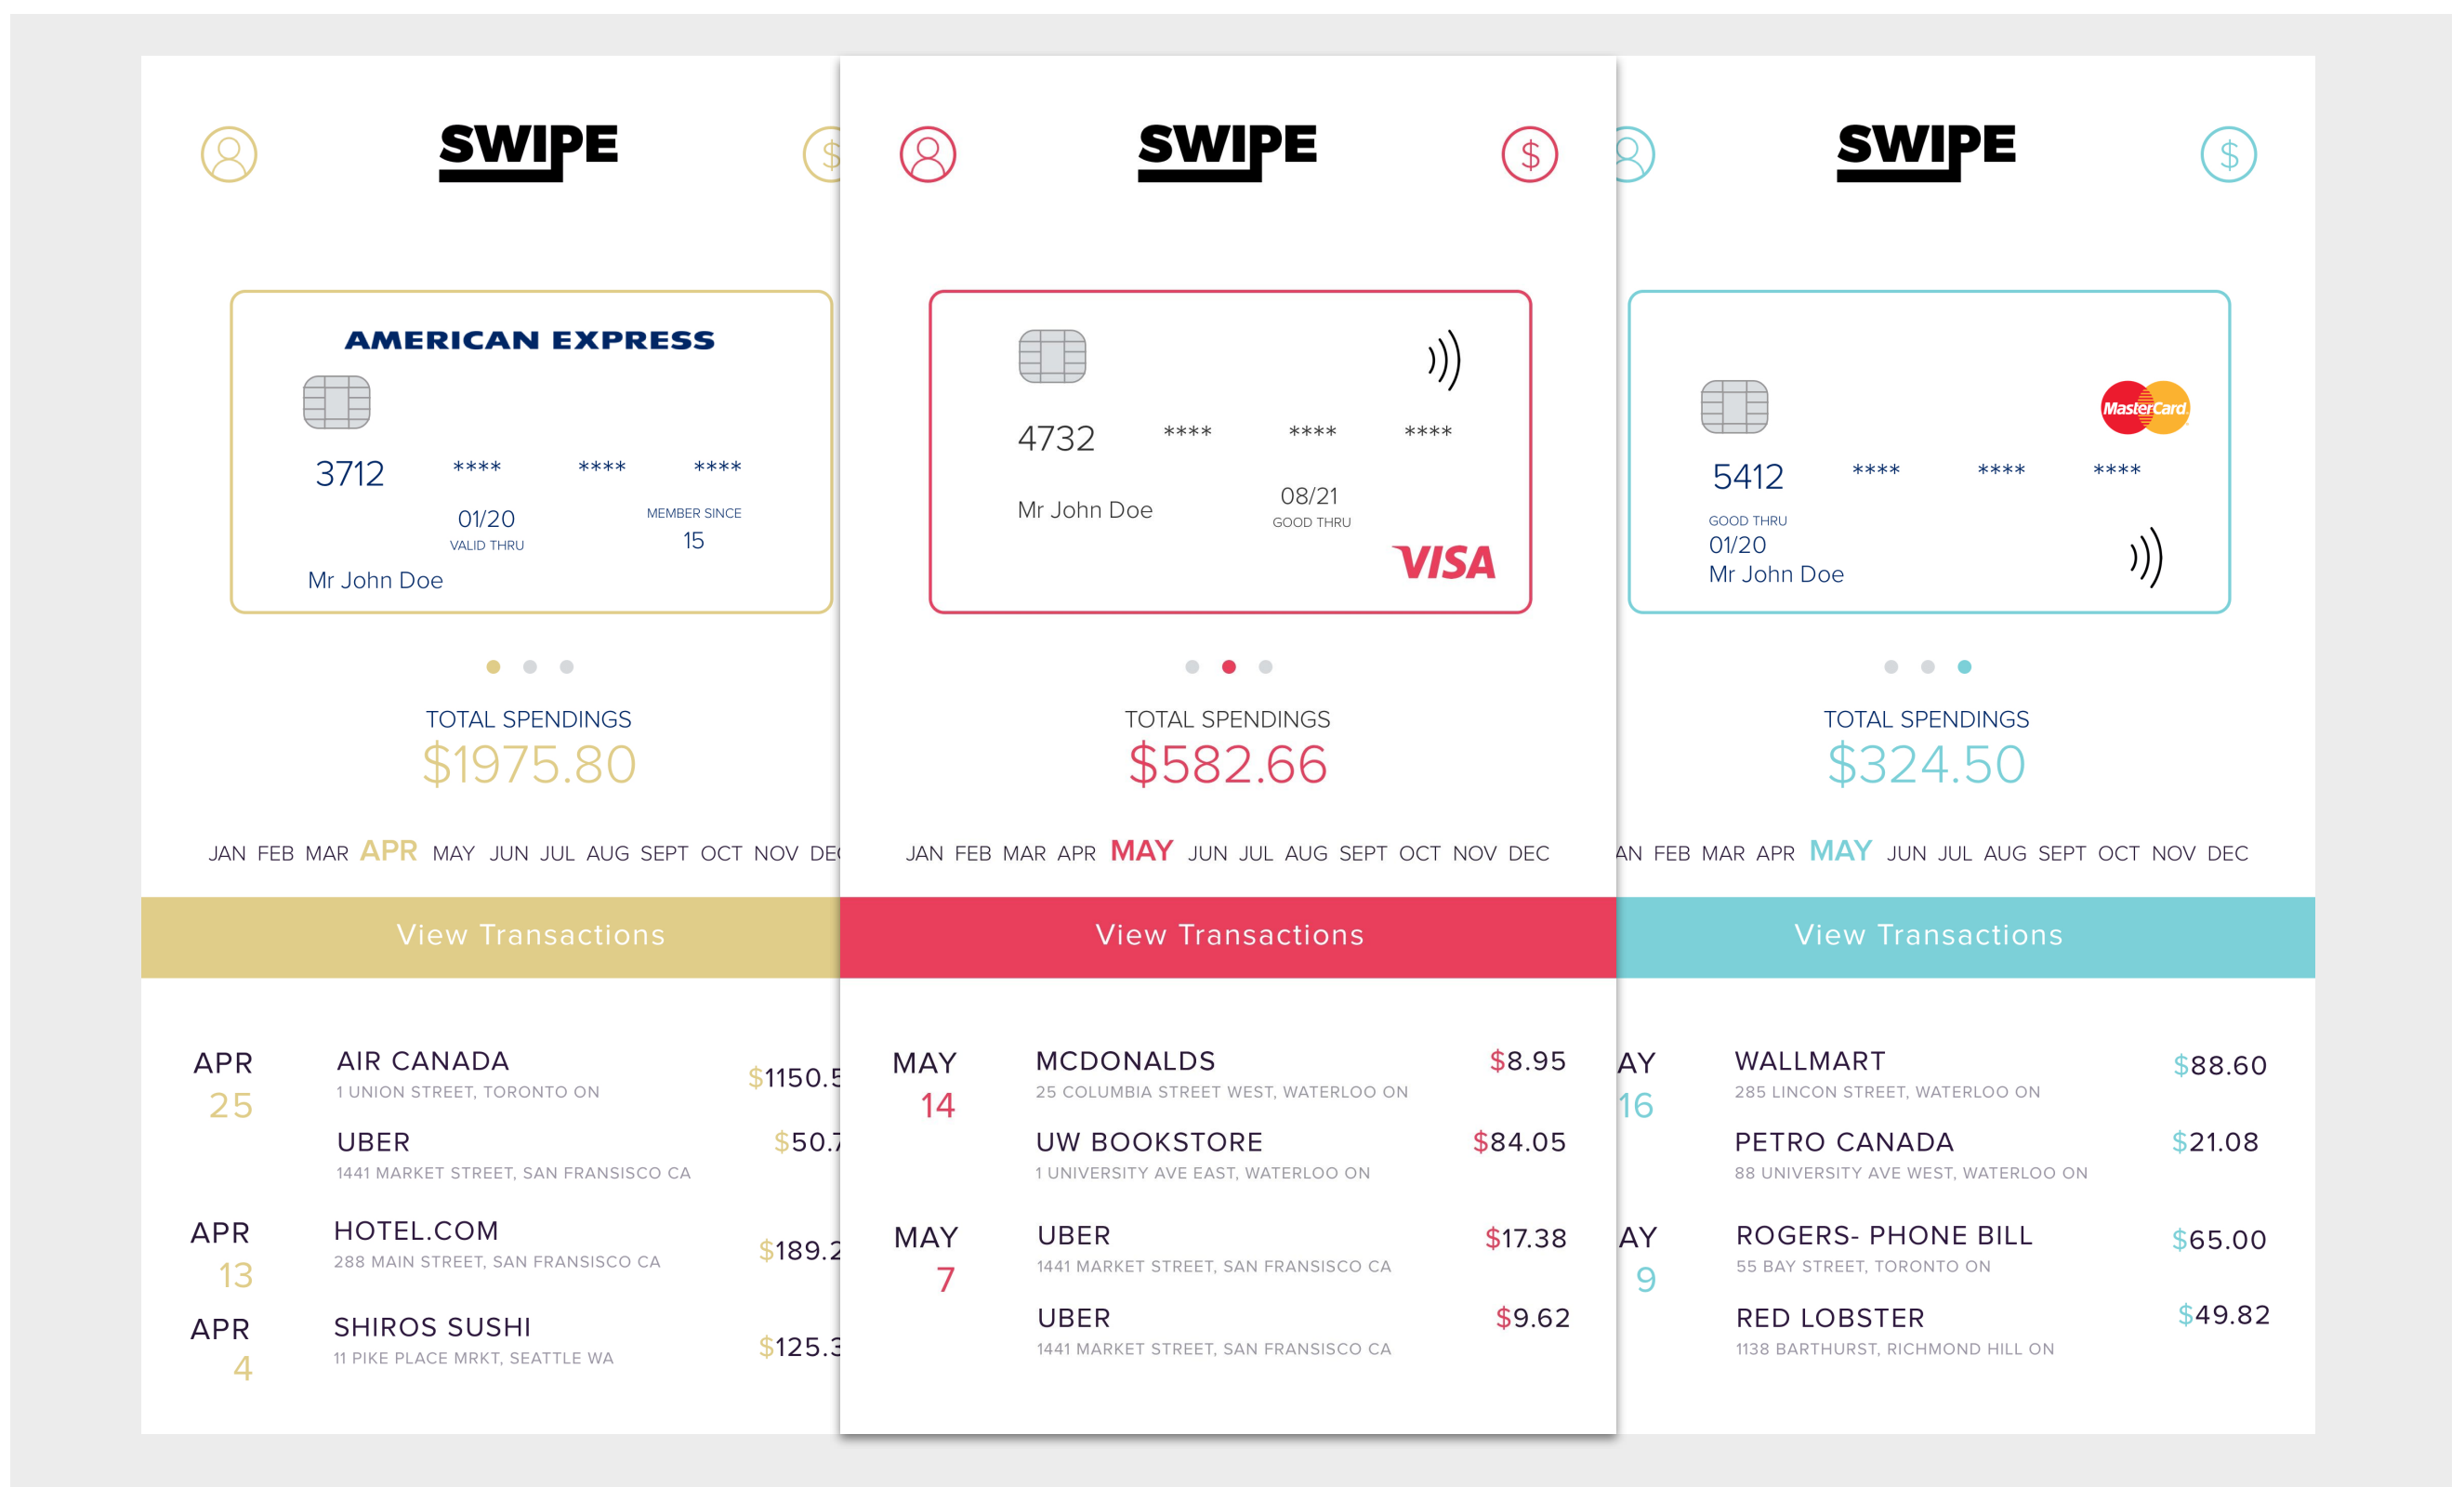

PRODUCT DESIGNER | APP DESIGNER

Swipe is an all in one application to manage transactions from all your bank accounts and credit cards. With Swipe you do away with multiple bank apps and organize all your activities in one place. See spending trends, set goals and make payments seamlessly all in one place in a clean and effective manner!

Motivation

I use different accounts for specific payments and sometimes it is difficult to track my spending habits, I looked to an all in one app to help make this process easier. This led me to design an experience to allow people track their spendings and payments all in one place.

MAIN FEATURES

Attach Multiple Cards

Connect as many cards and add it to your file. Easily navigate through cards and accounts and instantly see reports on activities for that given time. Once a card is added to file, we pull all the data and present it to you in a clean and effective way so the right amount of data is at your disposal.

Auto Tagging

From a brief preview, you can expand and see a more detailed log to reveal past transactions that you made. Go back and revisit payments in the past. We then make it easy to categorize costs by autotagging so you know exactly how much is being spent on certain things to help you plan for the future.
